## COMMUNITY SCIENCE PROJECTS

**Recluse Or Not?** is a Twitter-based community science project to enhance understanding of a rarely encountered, widely feared, medically important spider and to track its potential range expansion. I started the Twitter account [@RecluseOrNot](#) in 2017 (with collaborators Dr. Eleanor Spicer Rice and Dr. Matt Bertone at North Carolina State University), with the goals of (1) providing expert identification of spiders in submitted photographs; (2) communicating accurate information about recluse spiders in North America and the risk of envenomation; and (3) collecting data about the current distribution of recluse spiders and the spiders most commonly mistaken for them. This project is ongoing but has already yielded a rich scientific dataset based on contributions from across North America. We plan to report our results in a manuscript that we will submit to the open-access journal PeerJ. I have been invited to present this work in symposia at two international conferences.

**Media coverage:** [Science Friday \(NPR\)](#); [University of Toronto Scarborough News](#); [NC State University News](#)

**Spider Hunters** is an iNaturalist-based community science project that contributes data about the distribution, phenology, diet, and plant associations of the introduced candy-striped spider in North America, as part of my NSERC PDF-funded research program.
